

Ficus Monique Braid

MONIQUE BRAIDS

are now grown in our new State-of-the-Art shade houses. These shade houses have dual moving shade curtains which control light, humidity, and temperature, creating a stress-free environment. The moving shade systems provide ideal lighting for acclimatization. The results are tighter leaf internodes and wider leaves, creating a fuller plant.

MONIQUE BRAIDS

are all hand-trimmed by professional growers assuring uniformed sizes and shapes. The growers sanitize their clippers to insure that no diseases are ever transmitted between plants.

MONIQUE BRAIDS

are continuously grown and fed with our computerized fertigation drip system, which gives the plant clean glossy leaves so you don't have to clean them before putting them on the job.

MONIQUE BRAIDS

are potted in hard sided containers using a special soil blended for Kraft Gardens, using only the finest ingredients. The soil is checked daily by our growers for moisture content and fertilizer. This information is then programmed into a computer to deliver just the right amount of water and fertilizer. TM

Ficus Monique's glossy dark green ruffled foliage give this ficus a rich and elegant appeal.

Ficus Monique Braid

Monique Braid Facts

FICUS MONIQUE is a new and unique cultivar of the Ficus Benjaminia that was discovered in Holland. Since its first introduction in Holland in 1992, the Monique's market appeal, success and demand have been racing Monique's popularity to the forefront of the European foliage market. Production and sales of this proprietary variety in Europe, is being held at 1,200,000 plants annually.

FICUS MONIQUE has a bush-like growth pattern, with highly glossy crisp ruffled foliage when grown under low light levels. Ficus Monique may also be cultivated under high light levels, as under the Florida sun, and acclimatized prior to sale for use in the interior environment.

FICUS MONIQUE'S glossy dark green ruffled foliage gives this Ficus a rich and elegant appeal. Monique is renowned for its durability in the interior because of its ability to hold its foliage indoors. Its superior genetics have afforded Monique a thicker, crisper leaf than the Benjaminia of the past. TM

Care Instructions

LIGHT: 100 to 350 ft. candles

WATER: Keep soil evenly moist. Water weekly as needed.

FERTILIZE: Fertilize three times a year using 2 tsp soluble 20-10-20 per gallon, along with 1 tsp magnesium sulfate and 1/4 tsp manganese sulfate.

TEMPERATURE: 65° - 80°F is ideal.

TRIM: Trim to maintain shape. Cut after leaf internode.
